

CEDIA Show 2005

Indianapolis, IN
September 7-11, 2005

McIntosh Booth # 382

Attendance at CEDIA is heading towards record numbers and nearly everyone attending the show stopped by the McIntosh booth to see and hear the extraordinary XRT2K

Loudspeaker System,
MC2KW Tri-Chassis, 2,000 Watt Monoblock Amp, the C1000 Tri-Chassis Tube, Solid State or both Preamp, MDA1000 D/A Converter and the MCD1000 CD Changer. Wow, what a system this is.

McIntosh staff (all 11 of us) arrived on Monday the 5th and Tuesday the 6th put our working cloths on and proceeded to unpack and set up approximately 24,000 pounds of equipment and racks. It took 2 days plus 6 hours of system tweaking for that optimum sound. Below is the XRT System against the wall of our Home Theater demo room.

On display we brought one of each piece of gear in the current product line.

Ron Cornelius with Chuck Hinton providing relief support ran our Home Theater demo room where we had a pair of XRT2K's powered by two MC1201's, an MC501, MVP861 A/V Player, MS300 Music Server, MC207 7-Channel Power Amp, MX135 A/V Control Center, four XLS340's an XR27 Center and XLS112 Powered Sub and a 61" Marantz flat screen.

The awesome power of the XRT system did not allow us to play at high levels during the show. So, not to disappoint the crowd, a few minutes after the show closed for the day we cranked it up. Below is an after show hours photo of the crowd which gathered to hear the system Saturday evening. I counted 74 at one point! This gathering to hear the system happened every night of the show!
