

AM/FM STEREO RECEIVER

# SX-850

KCU

<ART-155-0>

 **PIONEER®**

## SX-850 FEATURES

### Latest Technology Front End

Dual Gate MOS FET (field-effect transistor) is employed in the FM front end, together with a 4-ganged variable tuning capacitor. Together with carefully selected circuit components, this provides outstanding performance in terms of sensitivity, image rejection and spurious rejection. In all of its specifications, the SX-850 FM tuner section compares favorably with the most respected separate component type tuners.

### High Selectivity Stages

Excellent capture ratio, stable operation and sharp selectivity are assured by three ceramic filters in the IF stages. The filters never need realignment and contribute to high reliability against aging and ambient temperature variations.

### Quadrature Detector and PLL MPX Demodulator

A balanced bridge differential amplifier performs quadrature detection of the FM signal. Linearity is assured throughout the frequency band, while distortion becomes minimized. Clear and stable separation is provided by the PLL (phase locked loop) multiplex circuit design.

### Reduced Distortion AM Circuit

Careful engineering is also evident in the AM tuner circuit. Automatic gain control in the RF and IF stages, together with a 3-gang variable capacitor and IC circuitry deliver improved image ratio, selectivity and frequency response, plus reduced distortion.

### Heavy Duty Split Power Supply

The dual positive and negative power supply incorporates extra large 15,000  $\mu$ F electrolytic capacitors and possesses plenty of reserve power. Protection and muting functions are included to both safeguard equipment and eliminate power on-off noise.

### Precision RIAA Phono Equalizer

Deviation from the RIAA standard is performed within  $\pm 0.3$ dB, while the ability of the phono inputs to accept relatively strong signal levels without distortion (200 mV rms) results in a wide dynamic range.

### High Reliability Protection Circuit

In the event of malfunction, valuable semiconductors and speaker are protected by a relay electronic protection circuit that detects DC output voltage or impedance overload. This circuit also functions to reduce noise during ON-OFF operation of the power supply.

### Versatile Tone Controls Plus Turn-over Selectors

Active NFB type bass and treble control circuits provide precise and stable control without affecting the mid-range. Turnover frequency selector switches determine the points at which the tone controls take effect, and a convenient tone on-off switch is also employed to allow a flat frequency response to be obtained at any time regardless of tone control and turnover switch settings. This is useful for checking the effects of the phono cartridge, speakers, listening room acoustics, etc. on the spaciousness of the sound.

### Direct Coupled Power Amplifier

The power amplifier of the SX-850, is a direct-coupled, pure complementary parallel push pull circuit, which uses a differential amplifier at first stage. SX-850 delivers

Continuous power output of 65 watts\* per channel, min. RMS, at 8 ohms or 85 watts\* per channel at 4 ohms from 20 Hertz to 20,000 Hertz with no more than 0.1% total harmonic distortion.

Plenty of power is available for rich and stable stereo reproduction.

### Important Additional Features

Two tape monitor circuits allow two stereo tape decks to be used for recording, playback and tape duplication.

Microphone input on the front panel adds to versatility and enjoyment.

The audio muting switch can be used to temporarily reduce the volume by 20dB when changing records or tapes or for other reasons, without continually adjusting the volume control.

Indicator lamps provide clear indication of operating mode.

### Tasteful Styling Complements High Performance

The exquisitely designed aluminum front panel is trimmed with solid walnut. Control functions and layout also add to both versatility and top grade components appearance. In combination with high quality source components and speaker systems, a magnificent stereophonic music system is composed for providing rich audio enjoyment.

\* Measured pursuant to Federal Trade Commission's Trade Regulation rule on Power Output Claims for Amplifiers.

# 1. SPECIFICATIONS

## Semiconductors

FETs . . . . .	3
ICs . . . . .	3
Transistors . . . . .	56
Diodes . . . . .	36

## Power Amplifier Section

Continuous Power Output from 20 Hertz to 20,000 Hertz  
(Both channels driven) . . . 65 watts per channel (8 ohms)  
85 watts per channel (4 ohms)

Total Harmonic Distortion  
(20 Hertz to 20,000 Hertz, from AUX)  
Continuous Rated Power Output . . . No more than 0.1%  
33 watts per channel power  
output, 8 ohms . . . . . No more than 0.05%  
1 watt per channel power  
output, 8 ohms . . . . . No more than 0.05%

Intermodulation Distortion  
(50 Hertz: 7,000Hertz=4:1, from AUX)  
Continuous Rated Power Output . . . No more than 0.1%  
33 watts per channel power  
output, 8 ohms . . . . . No more than 0.05%  
1 watt per channel power  
output, 8 ohms . . . . . No more than 0.05%

Frequency Response . . . . . 7Hz to 90,000Hz  $\pm 1$  dB

Input Sensitivity/Impedance  
POWER AMP IN . . . . . 1 V/50k ohms

Output  
Speaker . . . . . A, B, A+B  
Headphone . . . . . Low Impedance

Damping Factor  
(20Hz to 20,000Hz, 8 ohms) . . . . . 25  
Hum and Noise (IHF, short-circuited, A Network) . . 100dB

## Preamplifier Section

Input (Sensitivity/Impedance)  
PHONO 1 . . . . . 2.5mV/50k ohms  
PHONO 2 . . . . . 2.5mV/50k ohms  
MIC . . . . . 6.5mV/50k ohms  
AUX . . . . . 150mV/50k ohms  
TAPE PLAY 1 . . . . . 150mV/50k ohms  
TAPE PLAY 2 . . . . . 150mV/50k ohms  
TAPE PLAY 2 (DIN connector) . . . 150mV/50k ohms

PHONO Overload Level (T.H.D. 0.1%)  
PHONO 1 . . . . . 200mV (1kHz)  
PHONO 2 . . . . . 200mV (1kHz)

Output Level/Impedance  
TAPE REC 1 . . . . . 150mV  
TAPE REC 2 . . . . . 150mV

TAPE REC 2 (DIN connector) . . . . . 30mV/80k ohms  
PRE OUT . . . . . 1V/100 ohms

Total Harmonic Distortion  
(20Hz to 20,000Hz 1V output). . . No more than 0.05%

Frequency Response  
PHONO (RIAA equalization). 30Hz to 15,000Hz  $\pm 0.2$  dB  
AUX, TAPE PLAY . . . . . 10Hz to 50,000Hz  $\pm 1$  dB

Tone Control  
BASS . . . . .  $\pm 7$  dB/ $\pm 10$  dB (100Hz)  
Turnover Frequency 200Hz/400Hz  
TREBLE . . . . .  $\pm 7$  dB/ $\pm 10$  dB (10kHz)  
Turnover Frequency 5kHz/2.5kHz

Filter  
LOW . . . . . 30Hz (6dB/oct.)  
HIGH . . . . . 6kHz (6dB/oct.)

Loudness Contour (Volume control set  
at -40dB position) . . . . . +6dB (100Hz), +3dB (10kHz)

Hum and Noise  
(IHF, short-circuited, A Network, rated power)  
PHONO . . . . . 70dB  
AUX, TAPE PLAY . . . . . 90dB

Muting . . . . . -20dB

## FM Section

Usable Sensitivity . . . . .  
MONO . . . . . 10.3dBf (1.8 $\mu$ V)  
STEREO . . . . . 22.2dBf (7.1 $\mu$ V)

50dB Quieting Sensitivity . . . . .  
MONO . . . . . 17.2dBf (4.0 $\mu$ V)  
STEREO . . . . . 38.0dBf (44 $\mu$ V)

Signal to Noise Ratio at 65dBf . MONO . . . . . 72dB  
STEREO . . . . . 67dB

Distortion at 65dBf 100Hz . . . MONO . . . . . 0.15%  
STEREO . . . . . 0.3%  
1kHz . . . . . MONO . . . . . 0.15%  
STEREO . . . . . 0.3%  
6kHz . . . . . MONO . . . . . 0.4%  
STEREO . . . . . 0.4%

Frequency Response . . . . . 30HZ to 15,000Hz  $\pm 0.2$  dB  
Capture Ratio . . . . . 1.0dB  
Alternate Channel Selectivity . . . . . 80dB  
Spurious Response Ratio . . . . . 100dB  
Image Response Ratio . . . . . 85dB  
IF Response Ratio . . . . . 100dB  
AM Suppression Ratio . . . . . 55dB  
Muting Threshold . . . . . 14.0dBf (2.8 $\mu$ V)  
Stereo Separation . . . 40dB (1kHz), 30dB (30Hz ~ 15kHz)  
Subcarrier Product Ratio . . . . . 62dB  
SCA Rejection Ratio . . . . . 62dB  
Antenna Input . . . . . 300 ohms balanced  
75 ohms unbalanced

## AM Section

Sensitivity (IHF, Ferrite antenna)	300 $\mu$ V/m
(IHF, Ext. antenna)	15 $\mu$ V
Selectivity	35dB
Signal to Noise Ratio	50dB
Image Rejection	40dB
IF Rejection	65dB
Antenna	Built-in Ferrite Loopstick Antenna

## Miscellaneous

Power Requirements	120V 60Hz
Power Consumption	UL; 180W, 420W (max.) CSA; 400VA
Dimensions	526.6(W)x173(H)x411.5(D) mm 20-3/4(W)x6-13/16(H)x16-3/16(D) in
Weight Without package	19.1 kg (42 lb 3oz)
With package	22.4kg (49 lb 6oz)

## Furnished Parts

FM T-type Antenna	1
Operating Instructions	1
Hex. Wrench	1

### NOTE:

*Specifications and the design subject to possible modification without notice due to improvements.*

---

## HEX WRENCH

The accessory hex. wrench is provided for removing the TUNING knob or tightening its setscrew in event it becomes loose.

If required, loosen the setscrew by inserting the wrench into the hole on the side of the knob and turning the wrench counterclockwise. Be particularly careful not to scratch the front panel when employing the wrench.

## 2. FRONT PANEL FACILITIES

### SPEAKER BUTTONS

Two sets of speaker terminals, A and B, are provided on the rear panel, and the required speaker systems can be selected by depressing the SPEAKERS buttons as follows:  
 A . . . . . Speaker systems A operate  
 B . . . . . Speaker systems B operate

#### NOTES:

1. When any two buttons (A and B) are depressed simultaneously, the corresponding pairs of speaker systems will come into operation.
2. For private listening through headphones, return all the SPEAKERS buttons to the OFF (undepressed) position.

### PHONES OUTPUT JACK

Accepts stereo headphones.

### POWER SWITCH

After turning this switch ON there is a delay of some 3 to 6 seconds, during which time the protection circuit operates to eliminate unpleasant noise.

### BASS CONTROL

Clockwise rotation gives stronger emphasis to the bass range below the turnover frequency (which is selected by the BASS TURNOVER switch), while counterclockwise rotation reduces bass response.

### BASS TURNOVER SWITCH

This selects the frequency below which the bass tone control will begin to act. This "turnover" frequency can be set at 400Hz or 200Hz, to match the characteristics of the room, the program material, or your personal listening preferences.

### TONE SWITCH

In the OFF (up) position, this switch causes the amplifier section to operate with a flat frequency response regardless of the tone control setting.

### TREBLE TURNOVER SWITCH

This switch selects the frequency above which the treble tone control will begin to act. This "turnover" frequency can be set at 2.5kHz or 5kHz, to match the characteristics of the room, the program material, or your personal listening preferences.

### TREBLE CONTROL

Clockwise rotation gives stronger emphasis to the high range above the turnover frequency (selected by the TREBLE TURNOVER switch), while counterclockwise rotation reduces high-range response.

### FM TUNING METER

With the SIGNAL meter needle deflected to the right, make fine adjustment by centering the FM TUNING meter needle (indicating optimum reception).

### SIGNAL METER

For AM and FM station tuning.

**AM tuning:** Tune for maximum deflection of the SIGNAL meter needle to the right.

**FM tuning:** Both the SIGNAL and FM TUNING meters work together

### SPEAKER SYSTEM INDICATOR

### FM STEREO INDICATOR

### FM MUTING BUTTON

Leave this button undepressed (in the ON position) to suppress unpleasant interstation noise while tuning between FM stations. Low-strength signals may also be suppressed by this function, so to pick up a weak station depress this button to the OFF position.

### TUNING KNOB

Select the station and tune for optimum reception by observing the SIGNAL meter for AM stations, and both SIGNAL and TUNING meters for FM stations.

### PROGRAM SOURCE INDICATOR

### LOW CUT FILTER SWITCH

When low-pitched rumble (from turntable motor or other source) is obstructive, set this switch to the 30Hz position to provide 6dB/octave attenuation at frequencies below 30Hz. If no interference is experienced, set in the up position.

### HIGH CUT FILTER SWITCH

When high frequency scratch noise (from worn records or other source) is unpleasant, set this switch to the 6kHz position to provide 6dB/octave attenuation at frequencies above 6kHz. If there is no interference, set in the up position.

### MPX NOISE FILTER BUTTON

Comparatively high frequency noise, incurred when receiving weak FM stereo signals, can be eliminated by depressing this button to ON. In this case however, there will be some loss of stereo separation.

### ADAPTOR SWITCH

When employing adaptor components, such as a graphic equalizer adaptor, RG processor, or Dolby NR adaptor, set this ADAPTOR switch to ON.

### TAPE MONITOR (1 & 2) SWITCHES

Set these switches to the ON (down) position as follows:

- 1 . . . . . With a tape deck connected to the TAPE 1 jacks (REC and PLAY), either playback or monitoring of a recording in progress are possible.
- 2 . . . . . Same as in 1 above, with a tape deck connected to the TAPE 2 jacks (REC & PLAY, or REC/PLAY jack).

For normal use, leave in the OFF (up) positions.

### TAPE DUPLICATE SWITCH

Set this switch in the ON (down) position to duplicate or edit a recorded tape using two tape decks.

### FUNCTION SELECTOR BUTTONS

To select the program source, push the buttons as follows:

**AM** . . . . . For AM broadcast reception.

**FM** . . . . . For AM broadcast reception.

For FM stereo reception. Automatically receives monophonically during FM monophonic broadcasts. The STEREO indicator lights up when the broadcast is in stereo.

**PHONO 1** . . . . . To operate a turntable connected to the PHONO 1 input jacks.

**PHONO 2/MIC** . . . . . As above for PHONO 2 jacks, or for reproduction through a microphone connected to the MIC jack on the front panel. Note: when the microphone is plugged in the turntable connected to the PHONO 2 jacks cannot be used.

**AUX** . . . . . For listening to an audio component (cartridge tape player, TV sound tuner, etc.) connected to the AUX input jacks.

*NOTE: Only one FUNCTION button should be depressed at a time.*

### MIC JACK

Accepts a standard 6  $\phi$ mm microphone plug.

### AUDIO MUTING SWITCH - 20dB

Set to -20dB to attenuate the audio output by 20dB. This convenient feature saves having to disturb the VOLUME control, for example when answering the telephone.

### VOLUME CONTROL

Governs the level of sound outputs both from the speaker systems and from headphones.

### LOUDNESS SWITCH

Set to ON when listening at low volume. The frequency response of the human ear varies according to the listening volume, and the ON position compensates for hearing response by emphasizing the bass and treble.

### MODE SWITCH

Set to STEREO for normal stereo operation. When set to MONO, left and right channel signals will be mixed and reproduced monophonically from both speaker systems.

*NOTE: Recording stereophonically with the MODE switch in the MONO position may cause channel separation to deteriorate.*

### BALANCE CONTROL

Adjusts the balance between the sound volume from the left and right speaker systems or headphones.

# 3. CONNECTION DIAGRAM

# 4. BLOCK DIAGRAM

# 7. DISASSEMBLY

## Removing the Wooden Cover

Remove the two screws (A) on each side of the wooden cover.

## Removing the Bottom Plate

Remove the eleven screws (B) to detach the bottom plate.

## Removing the Front Panel

1. Loosen the setscrew of TUNING knob with a hexagonal wrench.
2. Remove all the knob by pulling.
3. Remove the two screws (C) from the top edge of the front panel.
4. Remove the three nuts (D) from the tone and volume control shafts.

## Removing the Tone Amplifier Assembly

1. Unscrew the three screws (E) of the chassis. Remove the tone amplifier assembly.
2. Remove the two screws (F) to detach the shield cover. After this has been done tone amplifier can be checked.

## Removing the Flat Amplifier Assembly

1. Unscrew the three screws (G) of the chassis.
2. Remove the flat amplifier assembly. After this has been done flat amplifier can be checked.

## Removing the Switch Assembly (SPEAKERS)

Unscrew the three screws (H) of the chassis.

## Removing the Switch Assembly (FM MUTING, MPX NOISE FILTER)

Unscrew the two screws (I) of the chassis.

## Removing the Switch Assembly (AM, FM, PHONO 1, PHONO 2/MIC, AUX)

Unscrew the two screws (J) of the chassis.

## Removing the Microphone Jack Assembly

Unscrew the two screws (K) of the chassis.

## Removing the Power Amplifier Assembly

1. Unscrew the six screws (L) which mount the heat sink and the shield plate on the chassis.
2. Unscrew the three screws (M) at the upper part of the power amplifier assembly.
3. This allows the heat sink to be turned forward. Remove the shield plate.
4. After this has been done the power amplifier can be checked.

### NOTE:

Before turning the power on, take particular care that the heat sink and power amplifier assembly are not contacting any other parts of amplifier.
