

CFD-60

SERVICE MANUAL

US Model
Canadian Model

SPECIFICATIONS

AUDIO POWER SPECIFICATIONS (US model)

Full-range speakers:

With 3.2-ohm loads, both channels driven from 150-15,000 Hz; rated 2.5 W per channel minimum RMS power, with no more than 10% total harmonic distortion in AC operation.

Model Name Using Similar Mechanism	CD Section	CFD-DW83
	Tape Section	NEW
Optical Device Name		KSM-210BAN
Tape Transport Mechanism Type		MF-60-64

OTHER SPECIFICATIONS

CD player section

System Compact disc digital audio system
Laser diode properties Material: GaAlAs
Wavelength 780 nm
Emission duration: Continuous
Laser output: less than 44.6 μ W
* This output is the value measured at a distance of about 200 mm from the objective lens surface on the optical pick-up block.

Frequency response

20—20,000 Hz \pm 2 dB

Wow and flutter Below measurable limit

Radio section

Frequency range FM: 87.6—108 MHz
AM: 530—1,710 kHz

Tape recorder section and general

Recording system 4-track 2-channel stereo
Frequency response 60—10,000 Hz
(with TYPE I (NORMAL) cassette)
Speaker Full-range speakers: 10 cm dia., cone type
Power output Full-range speakers: 2 W+2 W (at 3.2 ohms,
(Canadian model) 315 Hz, 10% harmonic distortion)

Inputs

Mixing microphone input jack (minijack)
Sensitivity 2.5 mV

Outputs

For low impedance microphone
Headphones jack (stereo minijack)

Power requirements

For 16—68 ohms impedance headphones
120 V AC, 60 Hz

Power consumption

DC 9 V, 6 size D (R20) batteries

Battery life

AC 20 W

Batteries for radio cassette-corder (hours)

	Recording	Playback
Sony SUM-1 (NS)	approx. 11	approx. 8
Sony Alkaline AM1 (N)	approx. 17	approx. 12

Dimensions

593 x 175.5 x 197 mm (w/h/d)
(23 $\frac{3}{8}$ x 7 x 7 $\frac{7}{8}$ inches)

incl. projecting parts and controls

Weight

Approx. 4.6 kg, incl. batteries
(Approx. 10 lb 2 oz)

Supplied accessories

AC power cord (1)

Design and specifications subject to change without notice.

CD RADIO CASSETTE-CORDER
SONY[®]

SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety check before releasing the set to the customer:

Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamperes). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2V AC range are suitable. (See Fig. A)

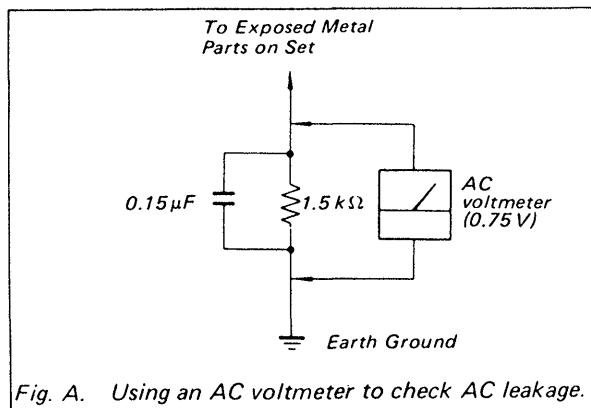

Fig. A. Using an AC voltmeter to check AC leakage.

SECTION 1

SERVICING NOTES

NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK OR BASE UNIT

The laser diode in the optical pick-up block may suffer electrostatic breakdown because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body.

During repair, pay attention to electrostatic breakdown and also use the procedure in the printed matter which is included in the repair parts.

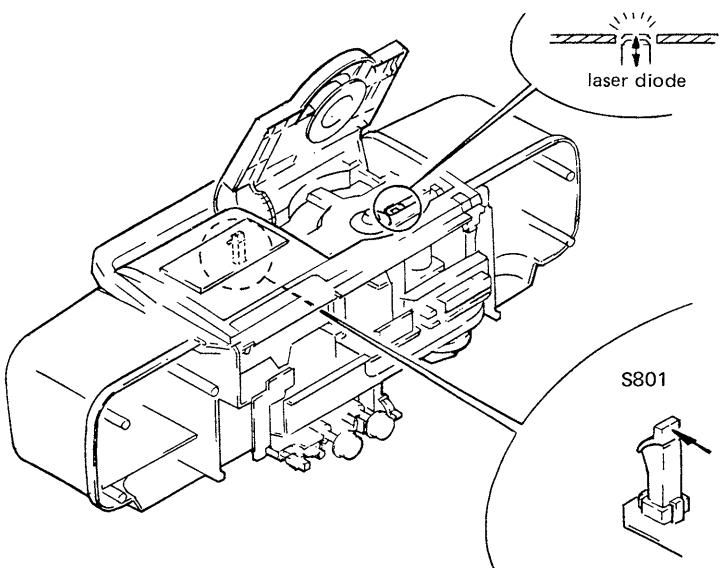

The flexible board is easily damaged and should be handled with care.

NOTES ON LASER DIODE EMISSION CHECK

The laser beam on this model is concentrated so as to be focused on the disc reflective surface by the objective lens in the optical pick-up block. Therefore, when checking the laser diode emission, observe more than 25 cm away from the objective lens.

LASER DIODE AND FOCUS SEARCH OPERATION CHECK

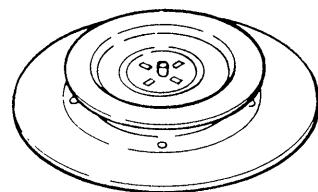

1. Remove the front cabinet assembly. (See page 4.)
 2. Turn POWER switch on with no disc inserted and make Function switch to CD position.
 3. Open the lid for CD.
 4. Turn on S801 as following figure.
 5. Press ▶ key.
 6. Confirm the laser diode emission while observing the objective lens. When there is no emission, Auto Power Control circuit or Optical Pick-up is broken.
- Objective lens moves up and down once for the focus search.

CHUCK PLATE JIG ON REPAIRING

On repairing CD section, playing a disc without the CD lid, use Chuck Plate Jig.

- Code number of Chuck Plate Jig: X-4918-255-1

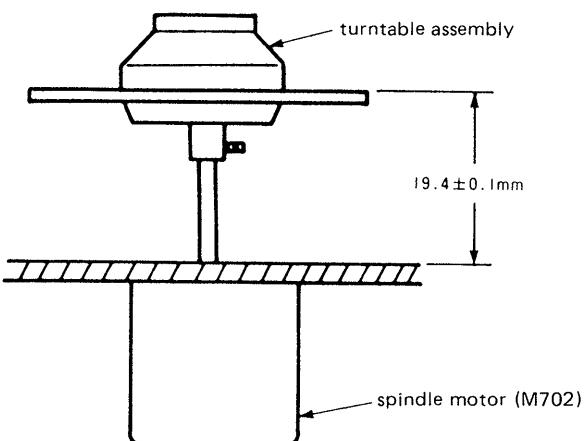

NOTE ON REPAIRING

The spindle motor (M702) and the turntable assembly are individually supplied as repair parts.

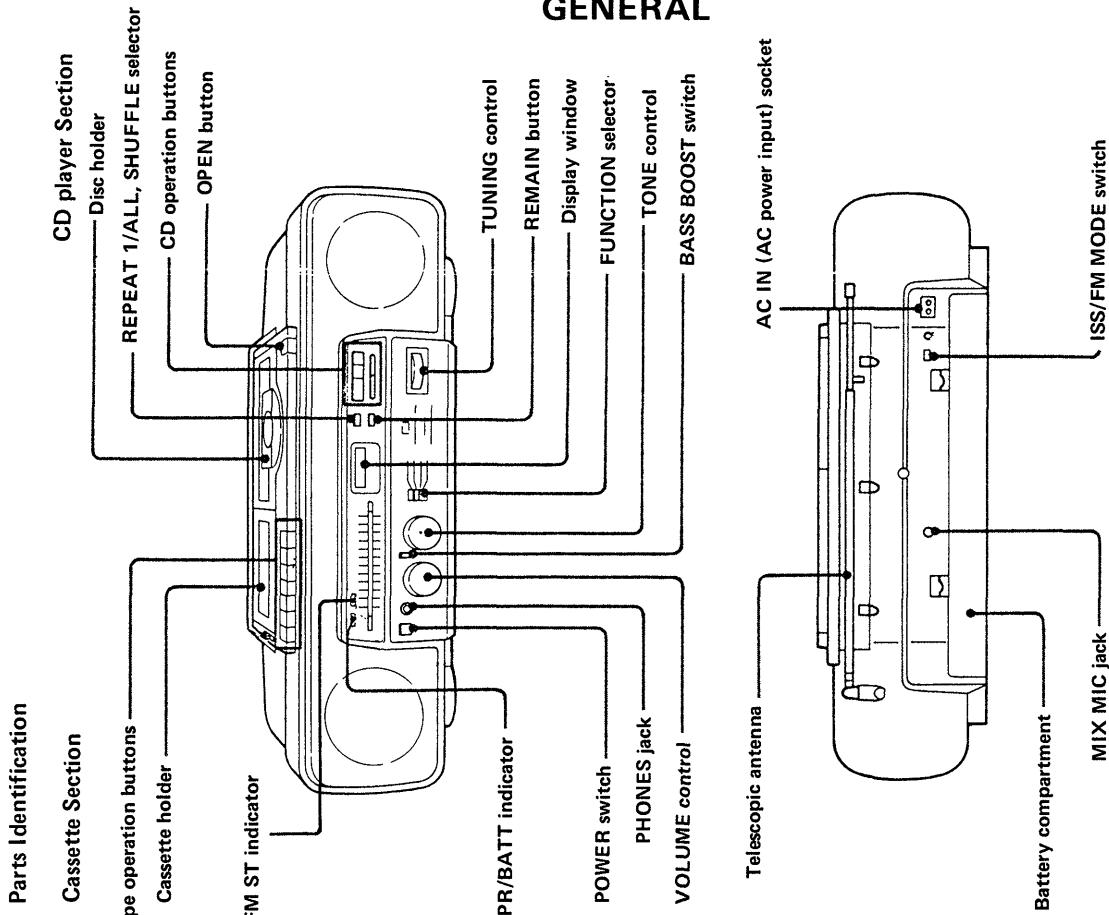

When repairing M702, please order the turntable assembly together.

Dimension is as follows.

SECTION 3
DISASSEMBLY

FRONT CABINET ASSY

TOP PANEL ASSY**MAIN BOARD ASSY**

SECTION 4

MECHANICAL ADJUSTMENTS

TAPE RECORDER SECTION

PRECAUTION

1. Clean the following parts with a denatured-alcohol-moistened swab:

record/playback head	pinch rollers
erase head	rubber belts
capstans	idle
2. Demagnetize the record/playback/erase head with a head demagnetizer.
3. Do not use a magnetized screwdriver for the adjustments.
4. After the adjustments, apply suitable locking compound to the parts adjusted.
5. The adjustments should be performed in the order given in this service manual.

Torque Measurement		
Mode	Torque meter	Meter reading
FWD	CQ-102C	20 to 60 g·cm (0.28 to 0.83 oz·inch)
FWD back tension		2 to 6 g·cm (0.03 to 0.08 oz·inch)
FF	CQ-201B	more than 50 g·cm (more than 0.69 oz·inch)
REW	CQ-201B	more than 50 g·cm (more than 0.69 oz·inch)

Tape Tension		
Mode	Tension meter	Meter reading
FWD	CQ-403A	more than 70 g (more than 2.47 oz)

SECTION 5

ELECTRICAL ADJUSTMENTS

PRECAUTION

1. Adjustments should be performed in the order given.
Generally playback circuit adjustments should be completed before performing recording circuit adjustments.
2. Adjustments should be performed for both L ch and R-ch.
Switches and controls should be set as follows unless otherwise specified.

- Positions of switches and control knobs
- | | |
|-------------------|-------------------|
| FUNCTION | TAPE |
| ISS/FM MODE | 2/ST |
| BASS BOOST | OFF |
| TONE | mechanical center |
| VOLUME | minimum |

- Standard recording position
Adjust the VOLUME knob so that the following regulated input/output signal levels are obtained.
- Standard input level

Input Pin	MIX MIC
Signal source impedance	300 Ω
Input signal level	2.5 mV (-50 dB)
Frequency	1 kHz

- Standard output level

Output Pin	Speaker (L, R)	PHONES
Signal source impedance	3.2 Ω	32 Ω
Output signal level	0.775 V (0 dB)	0.245 V (-10 dB)

0 dB = 0.775 V

- Test Tape

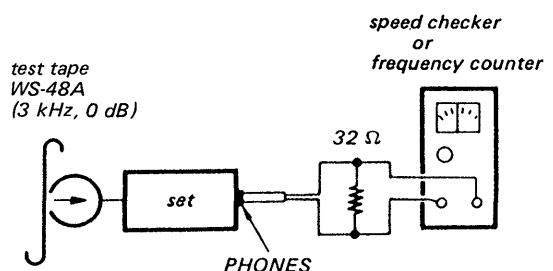

Type	Signal	Used for
WS-48A	3 kHz, 0 dB	Tape Speed Adjustment

5-1. TAPE RECORDER SECTION

Tape Speed Adjustment

Adjustment Procedure:

— Playback mode —

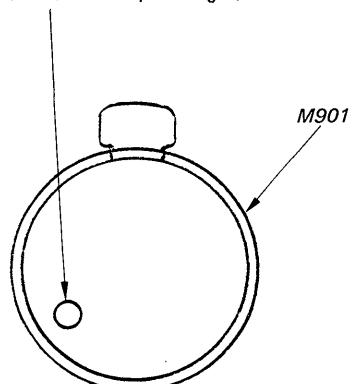

Adjustment Value:

Speed Checker	Frequency Counter
±2.5%	2,925 to 3,075 Hz

Frequency difference between the beginning and the end of the tape should be within 1% (30 Hz).

Adjustment Location:

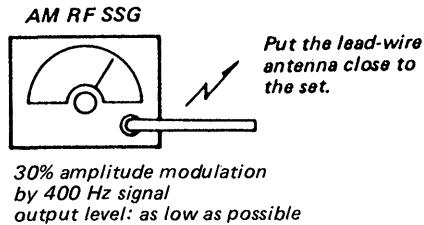

Adjust the adjustment resistor built in the motor.
(Adjust with inserting the screwdriver. Turning clockwise makes the speed high.)

5-2. RADIO SECTION

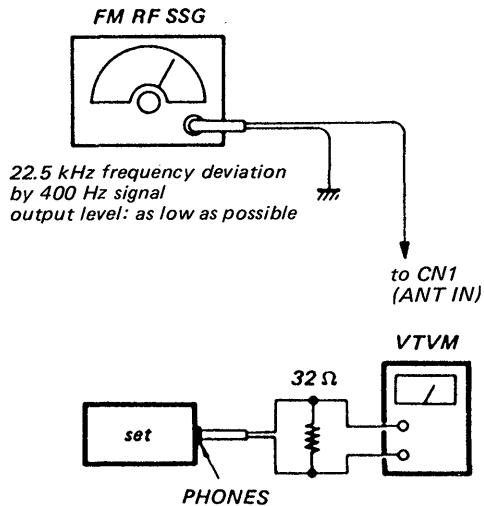

[AM]

FUNCTION switch: AM

[FM]

FUNCTION switch: FM

- Repeat the procedures in each adjustment several times, and the frequency coverage and tracking adjustments should be finally done by the trimmer capacitors.

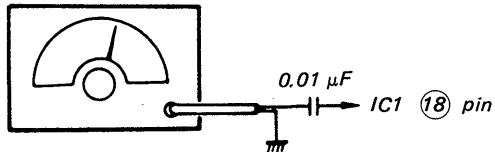

AM IF ADJUSTMENT	
Adjust for a maximum reading on VTVM.	
CP2	455 kHz
AM FREQUENCY COVERAGE ADJUSTMENT	
Adjust for a maximum reading on VTVM.	
T1	516 kHz
CT1-4	1,750 kHz
AM TRACKING ADJUSTMENT	
Adjust for a maximum reading on VTVM.	
L3	620 kHz
CT1-3	1,400 kHz
FM FREQUENCY COVERAGE ADJUSTMENT	
Adjust for a maximum reading on VTVM.	
L2	86.5 MHz
CT1-2	109.5 MHz
FM TRACKING ADJUSTMENT	
Adjust for a maximum reading on VTVM.	
L1	86.5 MHz
CT1-1	109.5 MHz

[FM VCO ADJUSTMENT]

Procedure:

- FUNCTION switch: FM

FM RF SSG

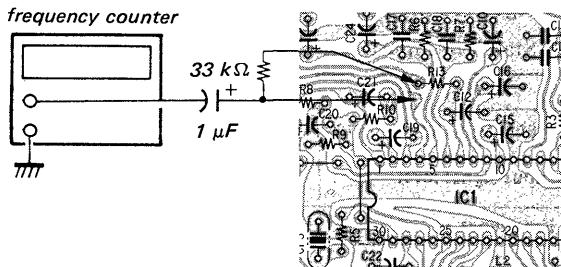

Carrier Frequency: According to the color of the mark on ceramic filter (CF2).

Mark	Carrier Frequency
red	10.7 MHz
blue	10.67 MHz
orange	10.73 MHz
black	10.64 MHz
white	10.76 MHz

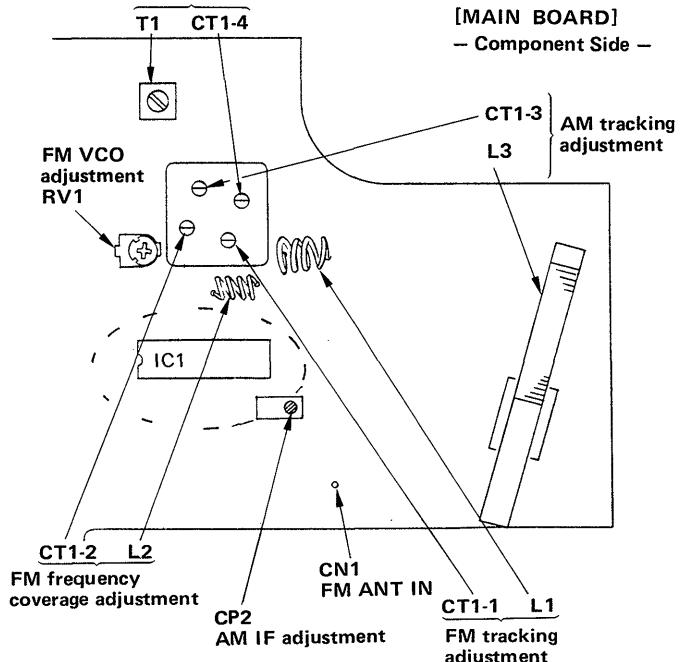

Output Level: 100 dB (0.1 V)

- 1) Adjust with RV1 so that the reading on the frequency counter becomes 76.0 ± 0.3 kHz.

Adjustment Location: main board

AM frequency coverage adjustment

[MAIN BOARD]
— Component Side —

5-3. CD SECTION

Notes on Adjustment

1. Perform adjustment in service mode.
After adjustment, be sure to release service mode.
2. Perform adjustments in the order given.
3. Use the disc (YEDES-18, Part No. 3-702-101-01) only when so indicated.

Before Adjustment

Put the set into service mode and perform the following checks. Repair if there are any problems.

• Sled Motor Check

1. Press **▶▶**, **◀◀** keys and confirm that the FOP moves smoothly from the innermost to outermost circumference and back smoothly and with no catching or abnormal noises.

▶▶ : FOP moves to the outer circumference

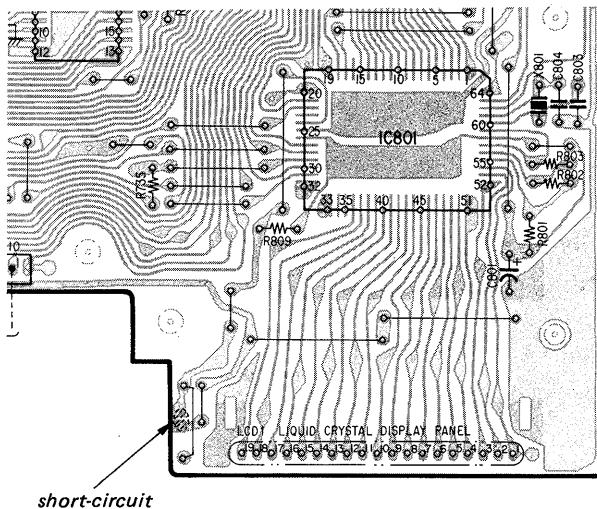

◀◀ : FOP moves to the inner circumference

• Focus Search Check

1. Press **▶** key. (Focus search operation is performed continuously.)
2. Look at the FOP objective lens and confirm that it moves up and down smoothly, with no catching or abnormal noises.
3. Press **■** key.
Confirm that focus search operation stops. If it does not, press **■** key again longer.

How to Put the Set into Service Mode

1. Short-circuit following portions on the CD main board.
 2. Turn the POWER on.
- CD main board (conductor side)

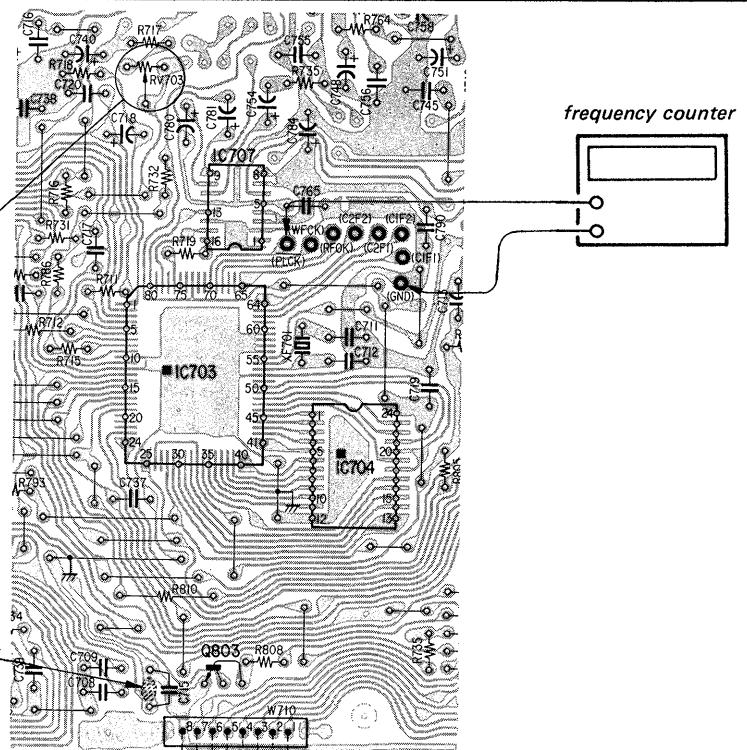

VCO Adjustment

Adjustment Procedure:

1. Short-circuit **A** portion on CD main board.
2. Adjust with RV703 so that the reading on frequency counter becomes 4.3218 MHz.
3. Release the short-circuit **A** portion. **RV703**

Adjustment Location:

CD main board
(conductor side)

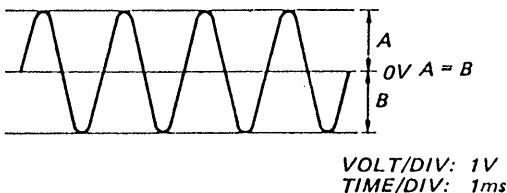

E-F Balance Adjustment

This adjustment is to be done when the optical block is replaced.

Adjustment Procedure:

1. Connect the oscilloscope between IC701 pins ① and ②.
2. Put the set into service mode. (See page 9.)
3. Press the \blacktriangleright and \blacktriangleleft keys to move the FOP to the center.
4. Insert disc (YEDS-18) and press \blacktriangleright key.
5. Adjust RV701 so that the oscilloscope traverse waveform is symmetrical, as shown in the figure below.
6. Release service mode after adjustment is completed.

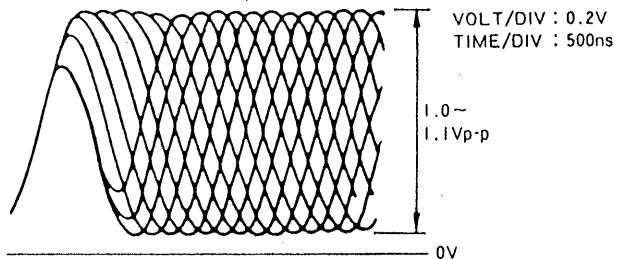

Focus Bias Adjustment

This adjustment is to be done when the optical block is replaced.

Adjustment Procedure:

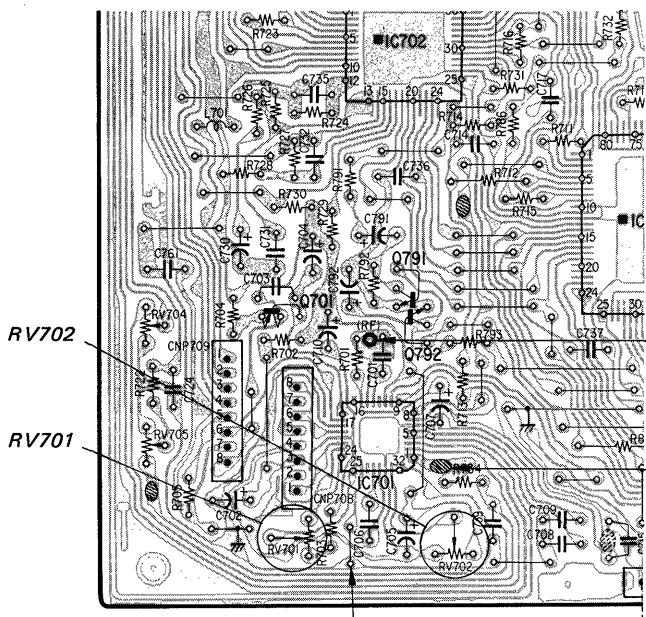

1. Connect the oscilloscope between IC701 pins ⑯ and ⑰.
2. Put the set into service mode. (See page 9.)
3. Press the \blacktriangleright and \blacktriangleleft keys to move the FOP to the center. (Move the FOP to the music area on the disc to enable easy visibility of the eye pattern.)
4. Insert disc (YEDS-18) and press \blacktriangleright key.
5. Adjust RV702 so that the oscilloscope waveform is as shown in the figure below (eye pattern). A good eye pattern means that the diamond shape (\diamond) in the center of the waveform can be clearly distinguished.
6. Release service mode after adjustment is completed.

● RF signal reference waveform (eye pattern)

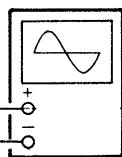

When observing the eye pattern, set the oscilloscope for AC range and raise vertical sensitivity.

Adjustment Location: CD main board (conductor side)

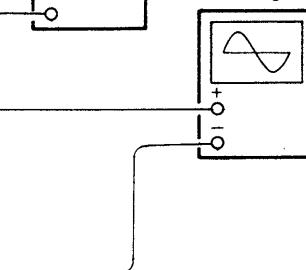

Focus Bias Adjustment

oscilloscope
(DC range)

E-F Balance Adjustment

oscilloscope
(DC range)

Focus/Tracking Gain Adjustment

A frequency response analyzer is necessary in order to perform this adjustment exactly.

However, this gain has a margin, so even if it is slightly off, there is no problem. Therefore, do not perform this adjustment.

Focus/tracking gain determines the pick-up follow-up (vertical and horizontal) relative to mechanical noise and mechanical shock when the 2-axis device operate.

However, as these reciprocate, the adjustment is at the point where both are satisfied.

- When gain is raised, the noise when the 2-axis device operates increases.
- When gain is lowered, it is more susceptible to mechanical shock and skipping occurs more easily.
- When gain adjustment is off, the symptoms below appear.

Symptoms	Gain	Focus	Tracking
• The time until music starts becomes longer for STOP ➡ PLAY or automatic selection (➡➡ buttons pressed. (Normally takes about 2 seconds.)	low	low or high	low or high
• Music does not start and disc continues to rotate for STOP ➡ PLAY or automatic selection (➡➡ buttons pressed.)	-	low	low
• Disc table opens shortly after STOP ➡ PLAY.	low or high	-	-
• Sound is interrupted during PLAY. Or time counter display stops progressing.	-	low	low
• More noise during 2-axis device operation.	high	high	high

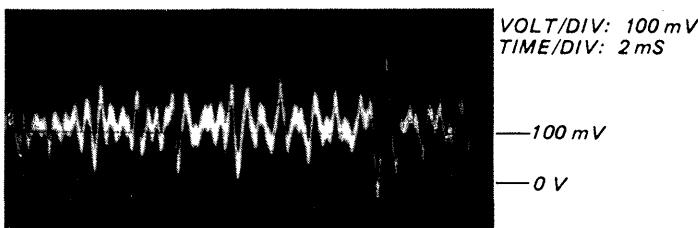

The following is a simple adjustment method.

— Simple Adjustment —

Note: Since exact adjustment cannot be performed, remember the positions of the controls before performing the adjustment. If the positions after the simple adjustment are only a little different, return the controls to the original position.

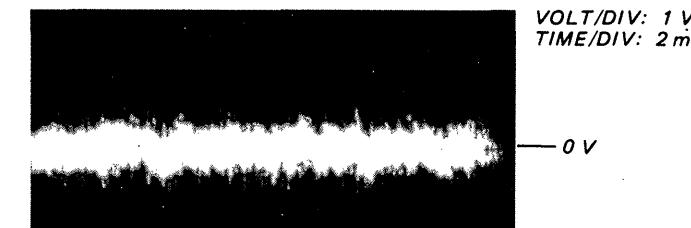

Procedure:

1. Keep the set horizontal.
(If the set is not horizontal, this adjustment cannot be performed due to the gravity against the 2 axis device.)
2. Insert disc (YEDS-18) and press ➡ PLAY button.
3. Connect the oscilloscope between IC701 pins ① and ⑥.
4. Adjustment RV704 so that the waveform is as shown in the figure below. (tracking gain adjustment)

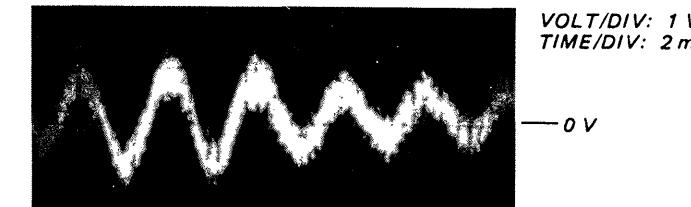

5. Connect the oscilloscope between IC701 pins ① and ⑥.

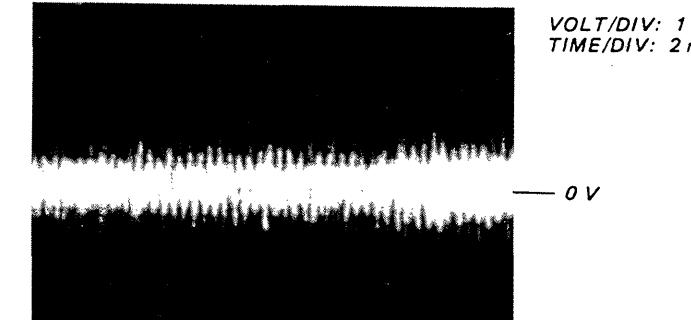

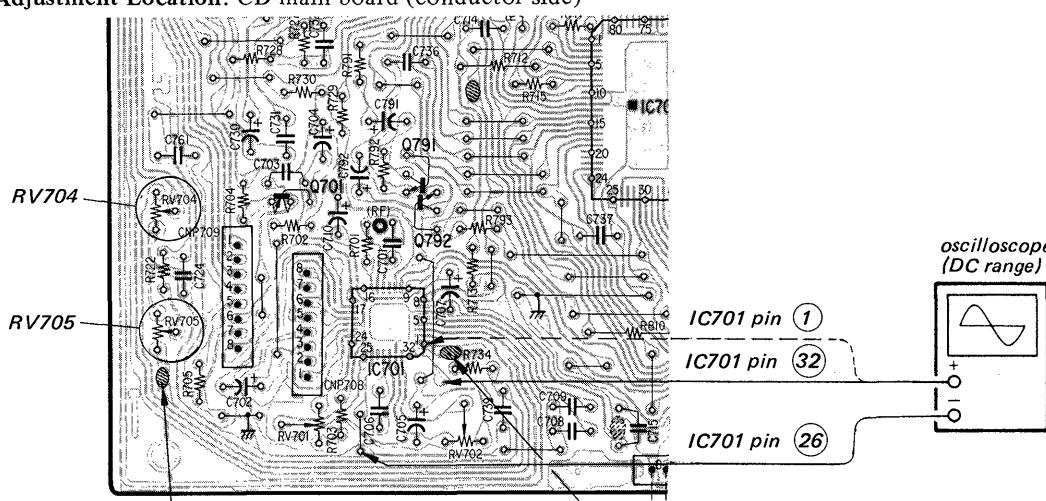

6. Adjust RV704 so that the waveform is as shown in the figure below. (tracking gain adjustment)

- Incorrect Examples (fundamental wave appears)
low tracking gain

high tracking gain
(higher fundamental wave than for low gain)

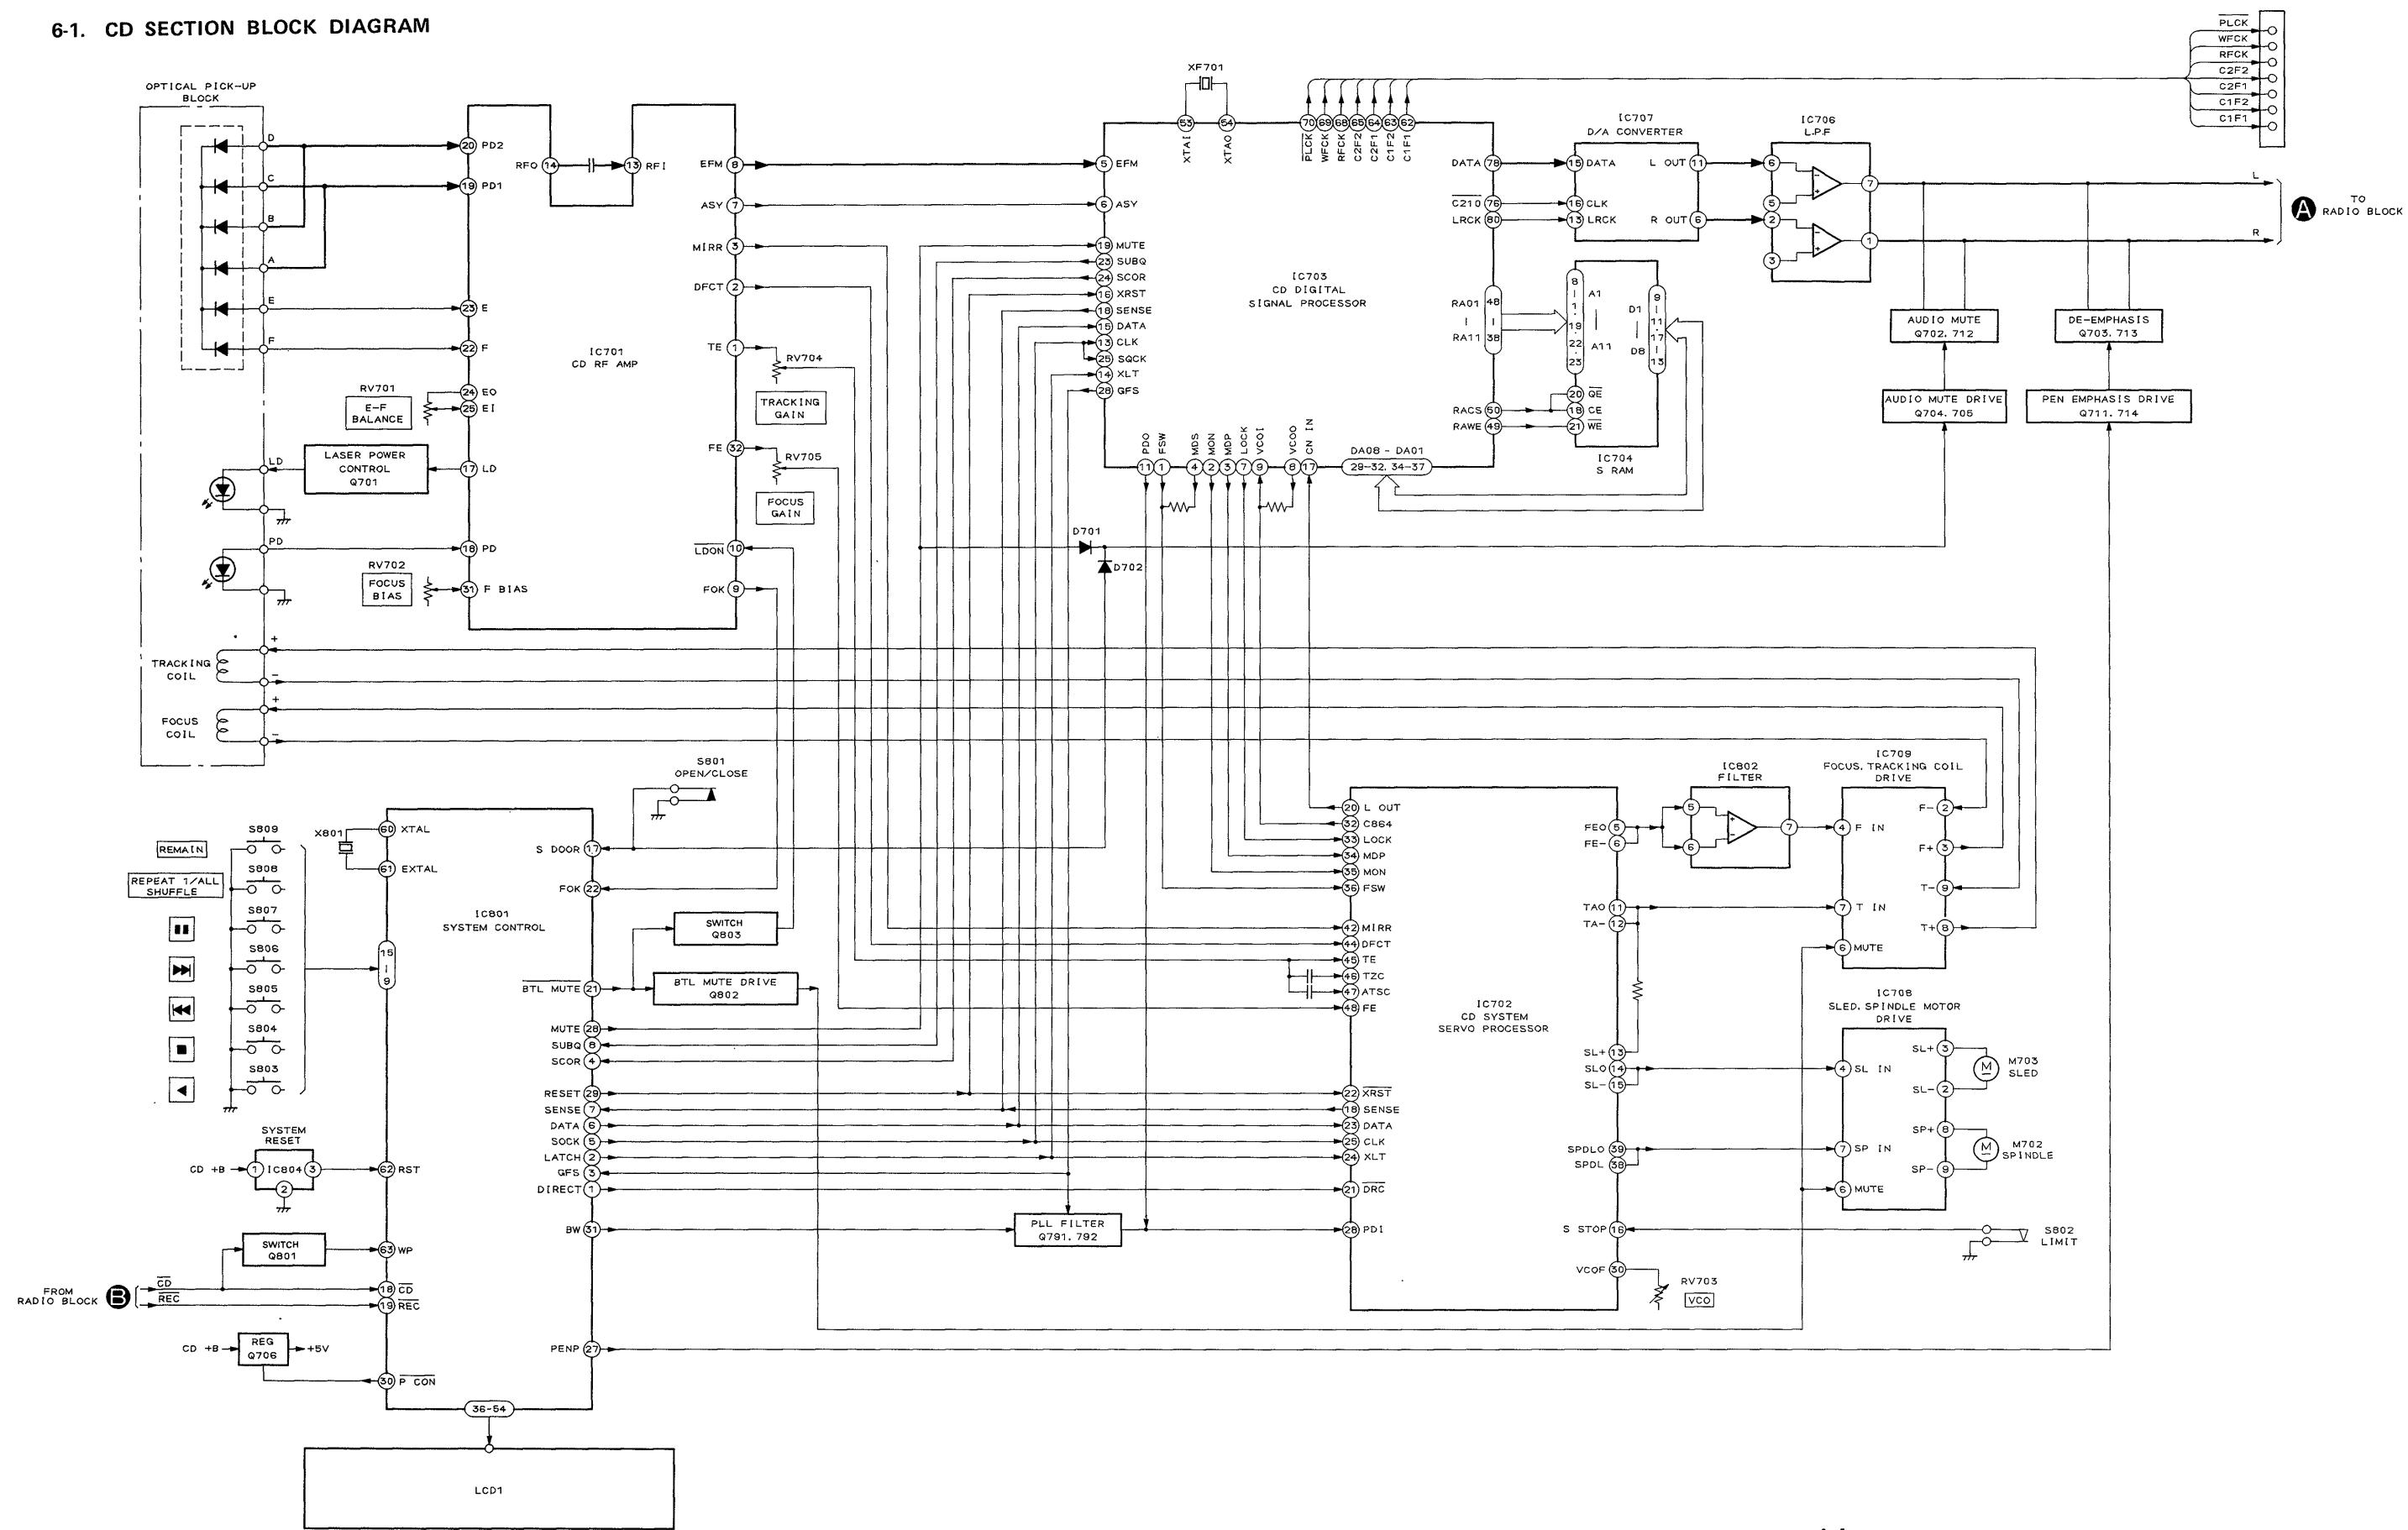

**Adjustment Location: CD main board (conductor side)**

Remove the solder bridge while adjusting the focus gain.
(After adjustment make the solder bridge.)

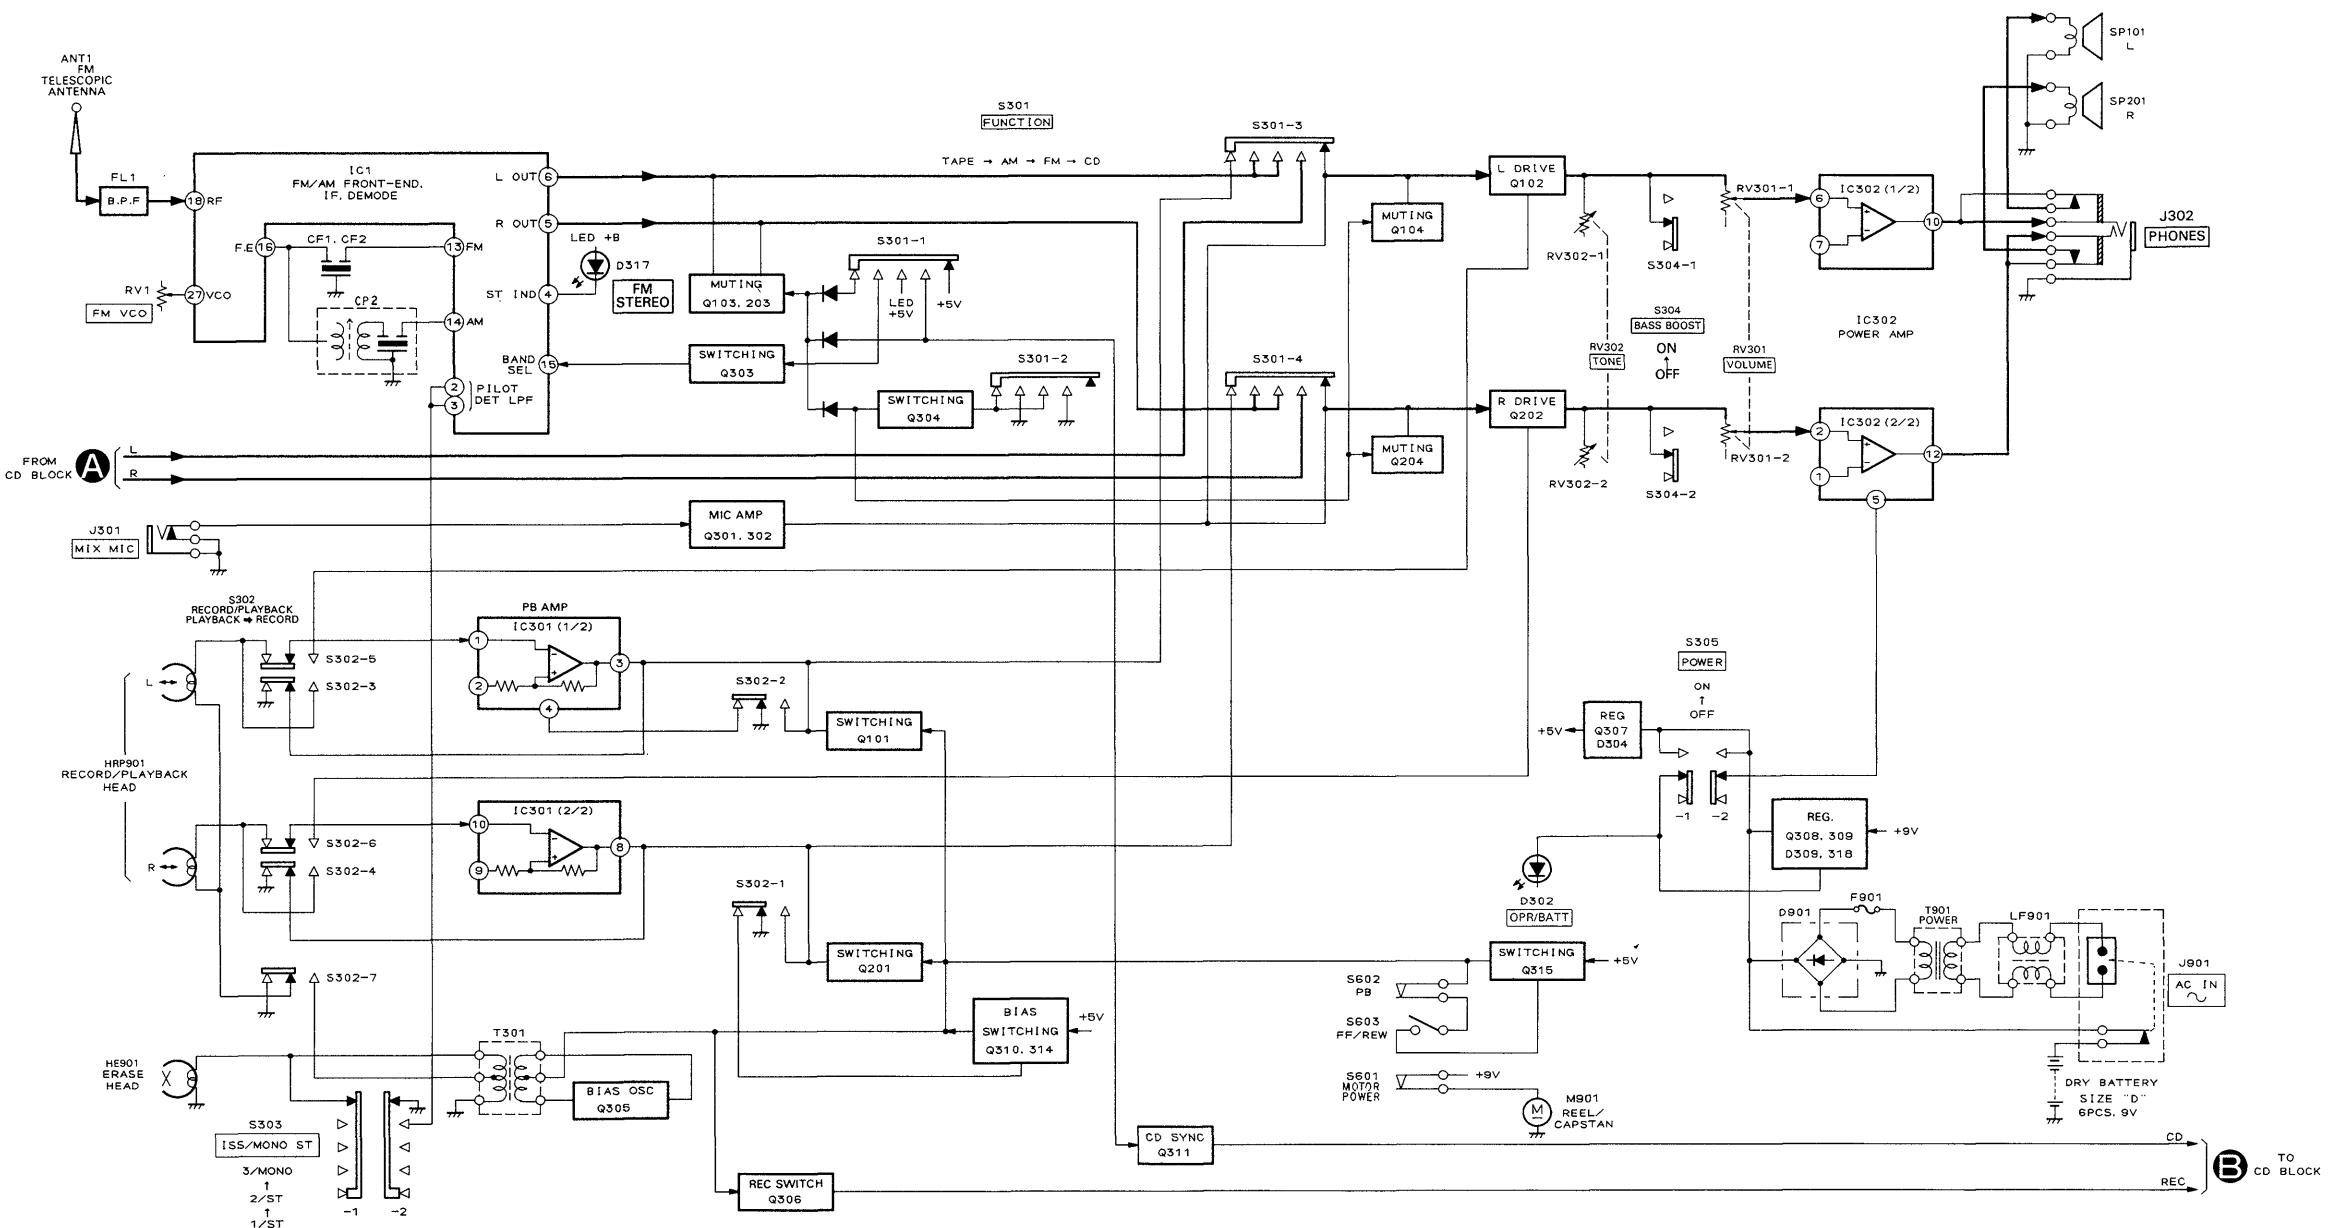

Remove the solder bridge while adjusting the tracking gain.
(After adjustment make the solder bridge.)

SECTION 8

ELECTRICAL PARTS LIST

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- Items marked “★” are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- If there are two or more same circuits in a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

CAPACITORS:
MF: μ F, PF: $\mu\mu$ F.**RESISTORS**

- All resistors are in ohms.
- F: nonflammable

COILS

- MMH: mH, UH: μ H

SEMICONDUCTORS

In each case, U: μ , for example:
 UA...: μ A..., UPA...: μ PA...,
 UPC...: μ PC, UPD...: μ PD...

The components identified by mark or dotted line with mark are critical for safety.
 Replace only with part number specified.

Les composants identifiés par une marque sont critiques pour la sécurité.
 Ne les remplacer que par une pièce portant le numéro spécifié.

Note:
The components identified by mark Δ or dotted line with mark Δ are critical for safety. Replace only with part number specified.

Note:
Les composants identifiés par une marque Δ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

SUPPLEMENT-2

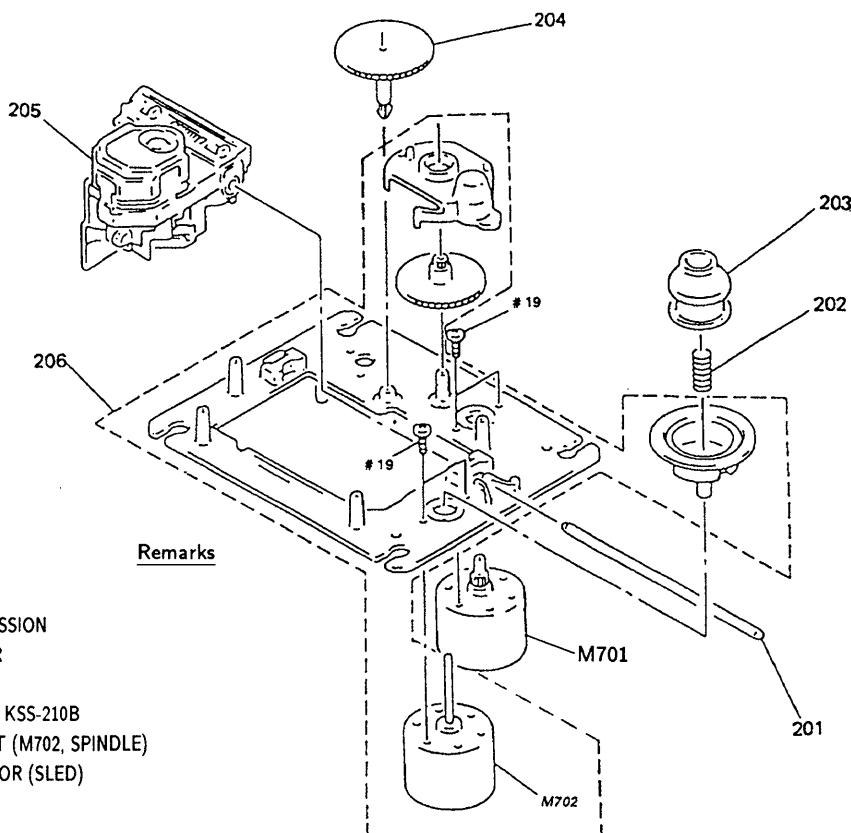

File this supplement with the service manual.

Subject : KSM-2101 BAN Optical Block Parts

The KSM-210 BAN and KSM-2101 BAN optical blocks were used in the CFD-60, but the Service Manual only shows the parts for KSM-210 BAN optical block. The type of optical block used in this model is marked on the optical block's chassis.

Refer to the following diagram for KSM-2101 BAN optical block parts :

OPTICAL BLOCK
(KSM-2101 BAN)

No.	Part No.	Description	Remarks
201	4-917-565-01	SHAFT, SLED	
202	2-625-191-01	SPRING, COMPRESSION	
203	2-625-186-01	RING (C), CENTER	
204	2-625-188-02	GEAR (A)	
205	A-8-848-137-11	DEVICE, OPTICAL KSS-210B	
206	X-2625-133-1	CHASSIS ASSY, TT (M702, SPINDLE)	
M701	X-2625-132-1	GEAR ASSY, MOTOR (SLED)	
#19	7-621-255-15	SCREW +P 2X3	

SUPPLEMENT-3

File this supplement with the service manual and supplement-1.

CHANGE OF RECORD/PLAYBACK HEAD

The record/playback head has two types: fixed type and adjustment type. When servicing and/or inspecting, check the type of the record/playback head and prepare the appropriate part.

- How to discriminate between these types

Fixed type: The tape guide of the head is provided at both sides.

Adjustment type: The tape guide of the head is provided at one side.

Adjustment Type:

MECHANICAL ADJUSTMENT

Tape Path Adjustment

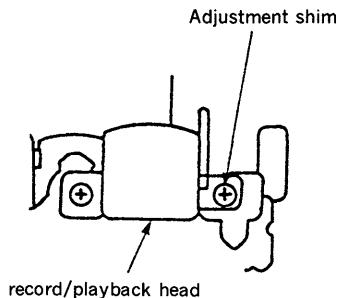

When the mode is playback, run a mirror cassette, then turn adjustment screw to eliminate tape curl and tape twist at tape guide on erase head and record/playback head.

Adjust the height by using head shim if needed.

Standard: $t=0.1$

Part No.	t
3-336-274-01	0.1
3-336-274-11	0.2

Adjustment Location:

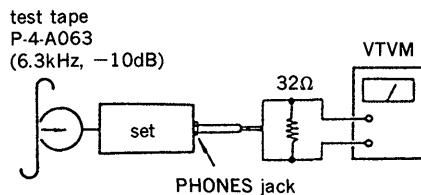

ELECTRICAL ADJUSTMENT

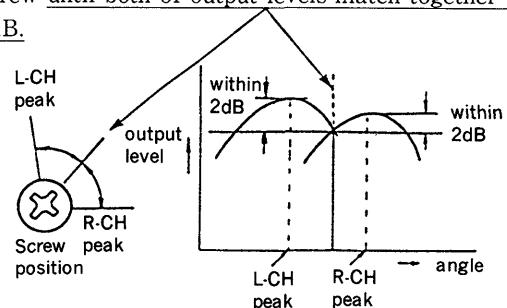

Record/Playback Head Azimuth Adjustment

Procedure: Adjust both FWD and REV.

1. Mode: playback

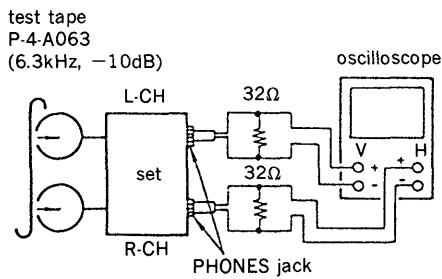

2. Turn the adjustment screw for the maximum output levels. If these levels do not match, turn the adjustment screw until both of output levels match together within 2dB.

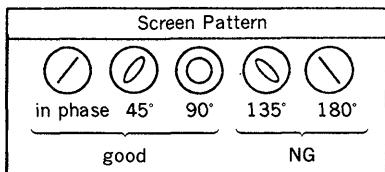

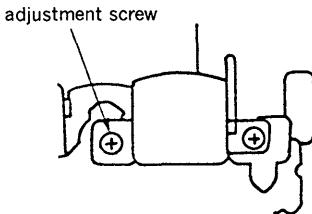

3. Phase Check

Mode: playback

Adjustment Location :

DIFFERENCE OF PARTS LIST

() : Page of SUPPLEMENT-1
